Task Manager: Used to monitor active applications, manage background processes, control startup programs, and track real-time system performance.
Event Viewer: Used to investigate and review logged system events, warnings, and errors for troubleshooting stability issues.
Resource Monitor: Used to examine in-depth, real-time utilization of system resources across CPU, memory, disk, and network.
Disk Cleanup: Used to identify and remove temporary files, system caches, and unnecessary data to free up storage space.
msconfig: Used to manage boot configurations, startup options, and system services when performing troubleshooting and clean boot tasks.
