H1
Bluetooth: A short-range wireless protocol used to exchange data between mobile and fixed devices over short distances.
Hotspot: A physical location or device setting that shares an internet connection wirelessly via Wi-Fi with nearby clients.
Tethering: The method of sharing a mobile device's cellular network connection with another computer via USB, Bluetooth, or Wi-Fi.
Mobile Device Management (MDM): Security and management software used by IT administrators to monitor, configure, and enforce policies on mobile hardware across an enterprise.
Laser printer: A non-impact printer that uses a laser beam to project an image onto an electrostatically charged drum to melt toner powder onto paper with heat.
Inkjet printer: A printing device that creates physical documents by propelling tiny droplets of liquid ink onto paper.
Thermal printer: A specialized printer that produces images by selectively heating thermal paper as it passes over a heated print head.
Impact printer: A mechanical printer, such as a dot-matrix printer, that creates text or graphics by physically striking an inked ribbon against paper.
