Ask me before running

In current versions of Windows 10 and 11, we'll automatically fix certain critical problems on your Windows device to keep it running smoothly.

We'll also recommend troubleshooting for other problems that aren't critical to normal Windows operation but might impact your experience. Unlike critical troubleshooters, recommended ones may change a setting you've personalized, so we'll ask for your permission first.

Critical Troubleshooting

Critical troubleshooting will automatically fix things like corrupt settings that keep critical services from running, make adjustments to work with your hardware, or make other specific changes required for Windows to operate with the hardware, apps, and settings you've selected. These are changes you won't notice. Critical troubleshooting happens automatically and can't be turned off.

Please answer some questions below so we can better help you with your needs.

Note: You may see options below that are not available on your troubleshooter settings page. This can be due to a different version of Windows (Windows 10 or Windows 11).

Tip: You can always click on the **"pencil"** icon in the blue box to change your choices.
